

CHOCHOŁOWY DWÓR :: JERZMANOWICE :: POLAND

The hotel and restaurant complex Chochołowy Dwór has been a charming location for organizing weddings, parties, conferences and family get-togethers since 2009, offering its guests a picturesque setting with a gorgeous view of the Krakow-Częstochowa Upland. The facility's architecture combines rustic design with old Polish traditions and modern solutions while perfectly blending into the surroundings of the Ojców National Park. The building is enveloped by a carefully designed garden, the beauty and functionality of which has been emphasized with the modern lighting we have delivered.

> THE SITUATION

Chochołowy Dwór isn't merely a hotel and restaurant with a recommendation from SLOW FOOD POLSKA. It also offers a ballroom, two conference halls and a music and entertainment club. The guests can enjoy their stay in the beautiful garden with the summer restaurant, LaWenda, and a barbecue hut. There is a playground for the youngest guests, a recreation area with a sports field and paintball grounds, and a parking facility. All of these green spaces gained a new character after dark thanks to our products.

For the past 10 years, the outdoor portion of the facility remained without proper lighting, so that the charm of this delight-

ful place could hardly be seen at night. More importantly, holding outdoor events using only torches as lighting posed considerable difficulties for the hotel staff. That's why the owners of Chochołowy Dwór entrusted us with the task of bringing out the beauty of the facility's spatial arrangement with unique illumination lighting that will additionally ensure adequate visibility and safety even after nightfall.

› THE PROCESS

Despite the obvious obstacles resulting from the exceptional popularity of Chochołowy Dwór, we were able to adapt to the working conditions that demanded considerable flexibility thanks to the efficient coordination of activities and the possibility of storing the finished products in our warehouses.

We approached the task with full professionalism and commitment. In addition to providing computer visualizations, we also performed a series of practical lighting tests on site. This was a way to make sure that the illuminations we designed will adapt perfectly to the diverse specifics of the whole area and will fully reflect the unique character of this place.

The black slate roof of the main building was illuminated by DELTA LED FR luminaires. The halogen luminaires in the parking lot were replaced with uniquely shaped PARK FLOWER and GARDEN FLOWER fixtures that provide friendly light with a very good color rendering index. The innovative luminaire with RACER lenses was manufactured especially for this project and proved to be perfect for the job. We used similar solutions to emphasize the beautiful spatial arrangement of the garden. PARK FLOWER WALL luminaires were used for providing lighting in the technical areas and a place where safety is particularly important - the children's playground.

In recreation areas, PARABEL luminaires designed for sports facility lighting were used in order to provide excellent conditions for nighttime sporting activities. It is worth noting that all of the installed products are characterized by their high ingress protection and resistance to mechanical damage and adverse weather conditions. At the customer's request, we also made it possible to install RGBW illumination lighting on the dome of the LaWenda in the future.

› THE CHALLENGE

Light plays an important role not only in building interiors, but also outside them. When properly selected, it can accentuate details and interesting architecture, and be an attractive element of evening events. At Chochołowy Dwór, where guests come to celebrate special events, get together with loved ones or acquire knowledge, the outdoor illumination lighting has to create a safe friendly and magical atmosphere. What's more, all of the applied luminaires have to be energy-saving, efficient and resistant against harmful weather conditions.

The specificity of working in such a busy and well-frequented place was a big challenge, as this hotel is rarely empty, even outside of the summer season. With outdoor events being held here even in the fall, performing any design and installation work was quite difficult and required us to be especially well-organized.

The entire investment additionally encompasses several smaller facilities located throughout an impressive area of more than 3 hectares, including a summer restaurant, a barbecue hut, as well as a recreation area with a playground, a climbing wall and sports fields. Hence, providing lighting for such a diverse space requires the use of several different outdoor lighting systems adapted to suit the respective functions. As one of the solutions, we proposed the innovative PARK FLOWER luminaire with lenses from the RACER street lighting fixture, which was designed especially for this project.

The facility's properly designed outdoor lighting not only emphasizes its visual appeal - it also ensures the safety of guests and employees.

Jacek Szewczyk
project coordinator ES-SYSTEM

Number of products:

over 37 pieces throughout an area of 3 hectares

PROJECT SUMMARY

Project name:	Chochołowy Dwór
Customer:	Dwór AMV Group Sp. z o.o. Sp. k.
Business sector:	hospitality, catering, events
Location:	Jerzmanowice, Poland
Project start date:	Q3 2018
Project end date:	Q1 2019
Project coordinator:	Jacek Szewczyk
Designer:	Przemysław Kałkus
Products:	GARDEN FLOWER MINI 1, GARDEN FLOWER MINI 3, PARK FLOWER MIDI 2, PARK FLOWER MIDI 3, PARK FLOWER MIDI 1 WALL, DELTA LED FR, PARABEL
Product features:	CRI > 80, color temperature: 3000 K, IK06, IP65
